

HAIR ACCESSORY UTILIZING A DRAWABLE
MEMBER AND A SECURING MEMBER

ABSTRACT OF THE DISCLOSURE

A method for fabricating a hair accessory includes forming a loop with a member having a first end, a middle, and a second end, wherein the loop is formed in the middle of the member. The method further includes attaching a plurality of hair strands including at least one of natural hair and synthetic hair to at least one support member, and spirally wrapping the at least one support member around at least one of the first end, the middle, and the second end of the member.
